

RASPBERRY PI SSH

CS95003 - Applied Robotics Lab

Ing. Gerardo Carmona

What is SSH?

- Secure Shell is a cryptographic network protocol for secure data communication, remote command-line login, remote command execution, and other secure network services between two networked computers.
- We will use a SSH client to connect to the Raspberry Pi remotely over a Local Area Network (LAN)

Software and configurations

- Raspberry Pi
 - No additional software is required, but we need to activate SSH service
- Windows
 - Putty: Free SSH and telnet client
 - Xming:

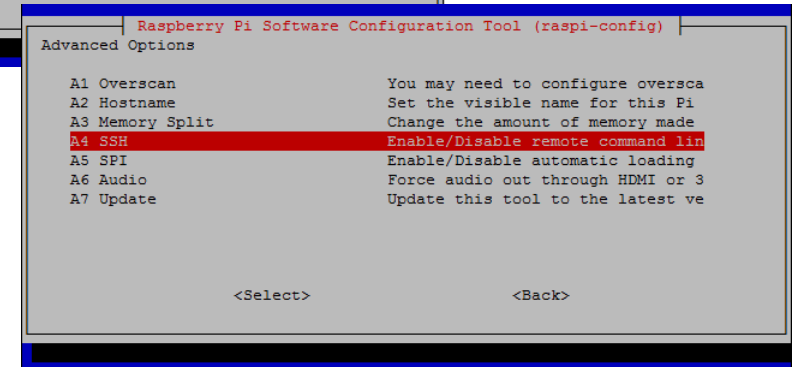

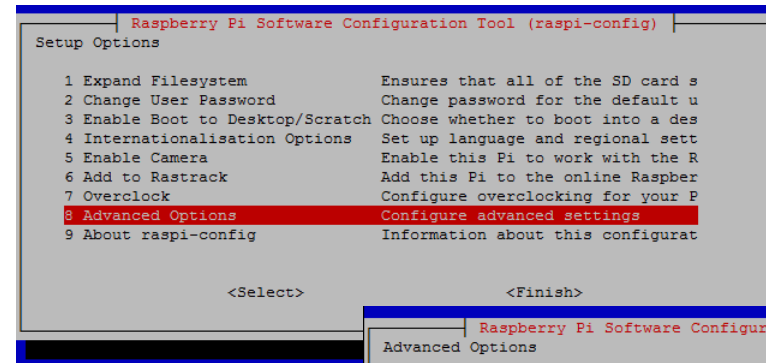

SSH ON THE PI

How to connect to the RPi

- First on a the linux shell write:

```
pi@raspberrypi ~ $ sudo raspi-config
```

- On the screen select:
 - Advanced Options >> SSH >> Enable
- Restart your Pi and login again.

IP Address

- Now we need to get the actual Raspberry Pi IP address.
- Type:

```
pi@raspberrypi ~ $ ifconfig
```

- A list of networks will appear, look at eth0 and save the IP Address.

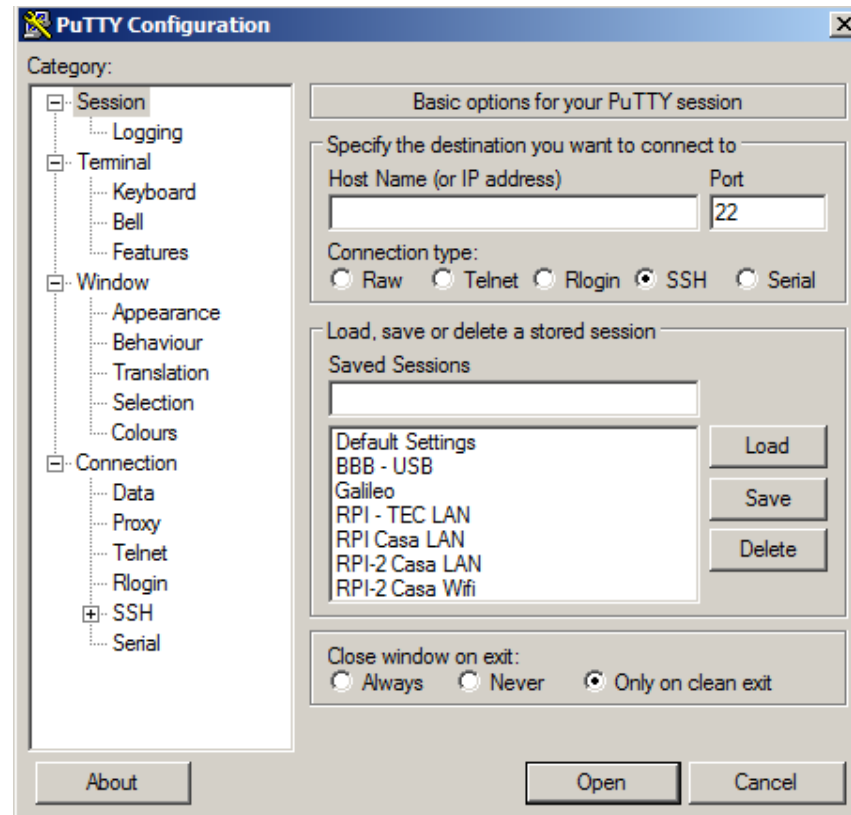

```
pi@raspberrypi ~ $ ifconfig
eth0      Link encap:Ethernet  HWaddr b8:27:eb:4d:79:ef
          inet addr:192.168.0.100  Bcast:192.168.0.255  Mask:255.255.255.0
          UP BROADCAST RUNNING MULTICAST  MTU:1500  Metric:1
          RX packets:399 errors:0 dropped:0 overruns:0 frame:0
          TX packets:231 errors:0 dropped:0 overruns:0 carrier:0
          collisions:0 txqueuelen:1000
          RX bytes:36134 (35.2 KiB)  TX bytes:66121 (64.5 KiB)

lo        Link encap:Local Loopback
          inet addr:127.0.0.1  Mask:255.0.0.0
          UP LOOPBACK RUNNING  MTU:65536  Metric:1
          RX packets:0 errors:0 dropped:0 overruns:0 frame:0
          TX packets:0 errors:0 dropped:0 overruns:0 carrier:0
          collisions:0 txqueuelen:0
          RX bytes:0 (0.0 B)  TX bytes:0 (0.0 B)
```

SSH ON WINDOWS

SSH Client

- Open Putty

Configure connection

First select Session

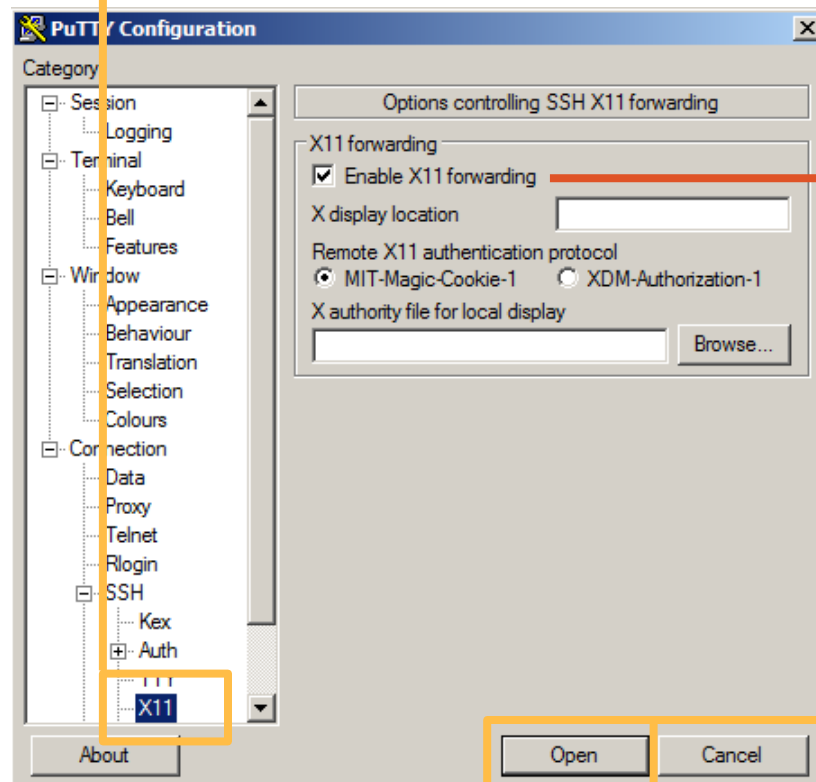

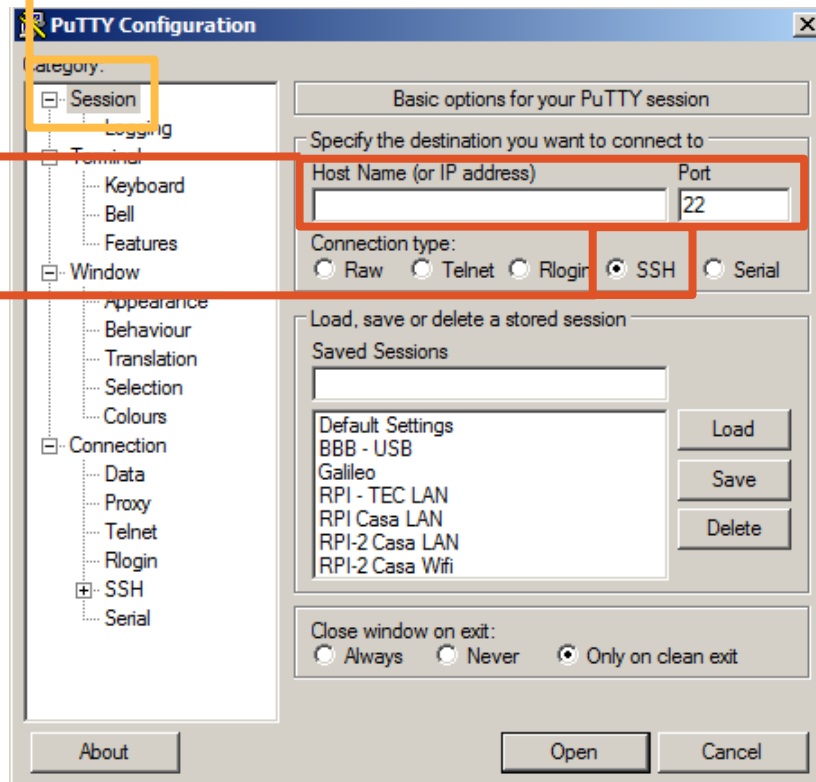

Write IP address of your Pi and leave port number to 22

Make sure "SSH" is selected

Second in X11 under SSH

Select "Enable X11 forwarding"

Click "Open"

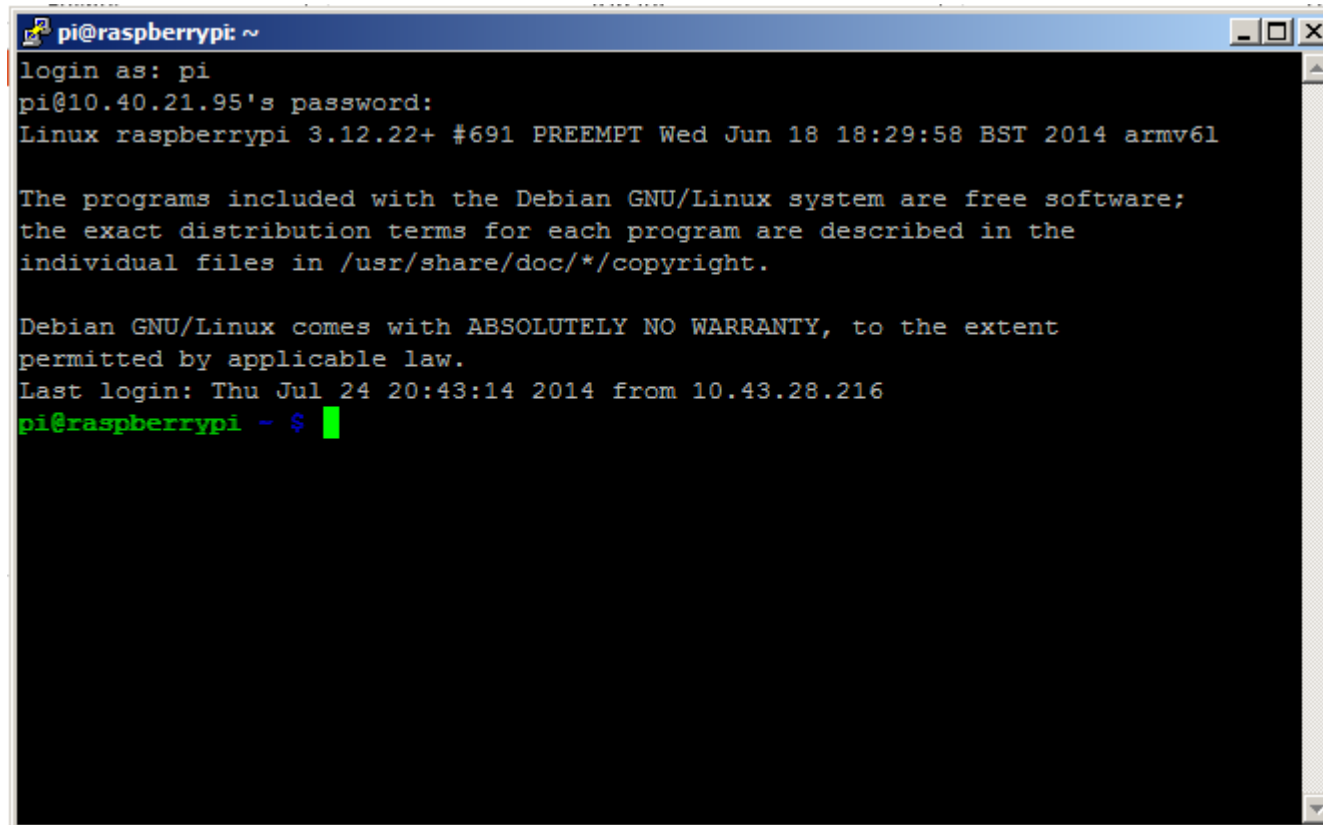

Login...

- Username: pi
- Password: raspberry

Terminal

```
pi@raspberrypi: ~  
login as: pi  
pi@10.40.21.95's password:  
Linux raspberrypi 3.12.22+ #691 PREEMPT Wed Jun 18 18:29:58 BST 2014 armv6l  
  
The programs included with the Debian GNU/Linux system are free software;  
the exact distribution terms for each program are described in the  
individual files in /usr/share/doc/*/copyright.  
  
Debian GNU/Linux comes with ABSOLUTELY NO WARRANTY, to the extent  
permitted by applicable law.  
Last login: Thu Jul 24 20:43:14 2014 from 10.43.28.216  
pi@raspberrypi ~ $
```

SSH ON UNIX TYPE OS

SSH Client

- Open the terminal
- Type:

```
pi@raspberrypi ~ $ ssh pi@10.40.30.23
```

Graphic mode

- In windows open Xming Server
- On the Pi run:

```
pi@raspberrypi ~ $ startlxde
```
